

The Fuellers' Charitable Trust Fund Special Projects for Special Times

The Fuellers' Charitable Trust fund invites you to contribute to specific projects during our Royal Master's period of office. These projects focus on supporting the education of young people, primarily from disadvantaged backgrounds, in both London and across the UK, and several provide opportunities for students to consider further education in the energy sector or energy careers.

Stuart Goldsmith, Past Master, Chairman, Fuellers' Charitable Trust Fund

Choose your project and donate now by clicking the following link [VirginMoneyGiving](#), and leave a message to specifying which project(s) you'd like to support!
If you'd prefer to donate a different way, follow this link to our [DonationPage](#)

Combines academic and professional engagement to support high-achieving BAME students from state schools across London.

£50 a student for **Work Experience Travel Fund**
Covers students' travel and basic expenses to enable them to undertake work experience which boosts their personal statements and CVs.

Interested? Follow this link [GeneratingGenius](#)

A leading international university committed to academic excellence and focused on business and the professions.

£3,000 funds the annual **Fuellers' Prizes**

The organisation:

Founded by Dr Tony Sewell CBE, Generating Genius has been working for 15 years to ensure that talented and able students from BAME backgrounds are positioned to excel in STEM careers. BAME students are often stereotyped as lacking aspiration or only being interested in sport and, with limited experience to include on their CVs, are frequently overlooked when applying for professional jobs.

Motivating high achieving BAME students from state schools across London, Generating Genius offers them the sort of educational enhancements that are more readily available to students in independent schools.

The project:

Work Experience Travel Fund

for age 16 - 18 : students are provided with travel and basic expenses to enable them to undertake work experience with top STEM companies so that they are able to share unique experiences to talk about on their personal statements and CVs.

Cost approx. £50 per student

The organisation:

Founded by Tomorrow's World presenter Maggie Philbin, takes STEM career opportunities to disadvantaged students across the UK through events ranging from Festivals that bring together students from up to 50 schools across a region and up to 150 industry specialists from a wide range of companies for a day of hands-on challenges and experiments.

Students in more deprived regions rarely aspire to careers in the energy sector as they have little chance of seeing, first-hand, the challenges and opportunities available to them from their STEM studies. The Fuellers have been involved in judging one of Teentech's awards for the past 3 years.

The projects:

Company Innovation Day

for age 14-18, covering supervision and travel for groups to visit STEM companies to see careers in action and to speak to their practicing engineers.

Cost £3,000

City of Tomorrow

For 100 pupils age 10+, an in-school day event introducing pupils to the contribution STEM makes to solving society's challenges & inviting pupils to design tomorrows cities.

Cost £2,000

<https://www.city.ac.uk/>

The organisation:

A leading international university and the only university in London committed to academic excellence and focused on business and the professions.

The Project:

Fuellers Prizes for Post-Graduates in the Engineering Programme

Recognising the high quality of City's programme and the role it plays in preparing professionals for the energy industry, the Trust gives two prizes for the best dissertation projects in the MSc in Energy and Environmental Technology and Economics.

The project topics are usually proposed by the students and refined through discussion with supervisors in the proposed areas. Qualifying projects address aspects of energy in the UK at micro or macro scale and are typically concerned with one or more key aspects of technology, environment, economics, policy and regulatory framework or societal impact.

Cost: £3,000 (£2,000 1st prize & £1,000 2nd prize)

PLATANOS COLLEGE

An outstanding school for
pupils of all abilities

<http://www.platanoscollege.com/>

The organisation:

The school that the Trust has supported for several years, Platanos exists and works for all pupils and learners and holds an unshakeable belief that the school can make a difference and change lives.

The Project:

Fuellers' Music Scholarship

In September 2020, the Trust will award its first Fuellers' Music Scholarship to a Year 7 student on entry to the school, which will provide up to 35 hours of individual tuition, cover examination fees and grade syllabus books and, in the case of guitar and violin scholars, the cost of the instrument itself.

It is intended that a pupil awarded the Scholarship will receive funding through their school career, subject to annual review.

Cost £1,500 per pupil per year

<https://www.smallpeicetrust.org.uk/>

The organisation:

The Smallpeice Trust was founded to give young people the support they need to bring their big ideas to life through STEM. Many schools struggle to employ specialist physics teachers which can mean students rarely hear about the full range of engineering disciplines and the study and career opportunities available within these fields.

The Project:

Future Energy STEM hands-on days

for up to 60 students age 14 - 16, an in-school day event focusing on Future Energy where students are inspired to design and build a working model and to explore the career opportunities available in energy by demonstrating the link between the classroom and the wider world.

Cost £1,000 per day

<https://www.arkwright.org.uk/>

The organisation:

Arkwright Engineering Scholarships are a Smallpeice Trust programme and consider themselves the most prestigious scholarship scheme of its type in the UK.

The Project:

Arkwright Scholarship

Scholarships fund sixth-form students through their A levels, encouraging them to pursue STEM subjects at a tertiary level and to pursue careers in the field. The funding can be used to support the purchase of components and materials to enhance or complete their technical projects or to purchase textbooks, reference books or fund attendance at courses, summer schools or university open days.

A recent Fuellers' Arkwright scholar comments "The Fuellers' help and support deepened a pre-existing interest in the energy sector. Fueller events and conversations with members allowed me to meet and network with experienced professionals in their given sectors."

Cost: £1,000 per year for two years
